SUMMARY

B.Sc. Computer Science undergraduate and founder of Siffty, an AI-powered Instagram DM automation SaaS that I built in under 6 months and got approved by Meta. I build real products by researching each problem, planning features, directing AI coding agents step by step, testing everything, and fixing issues with AI-assisted debugging. I learn while I build, and I also create motion-design launch videos with AI video tools. Now looking to grow into AI/ML roles.

SKILLS

AI Tools: Claude, Claude Code, Antigravity, ChatGPT, Gemini; writing structured prompts and step-by-step build plans for AI agents

Product Building: Feature planning, user flows, pricing plans, testing, bug finding, AI-assisted debugging, product launch

Research: Learning new tools and technologies while building, comparing options, reading official docs, solving problems independently

Creative & Motion Design: Launch and promo videos with motion design using the Higgsfield video-generation MCP through Claude Code, AI image generation, UI and landing page design, demo video editing

Familiar With: Python, Next.js, Node.js, PostgreSQL, Prisma, Git/GitHub, Docker, Gemini API, Meta (Instagram) API, Google OAuth

PROJECT

Siffty — AI Instagram DM Automation SaaS | siffty.com Jan 2026 – Present

Founder and sole builder | Built in under 6 months | Approved by Meta | Registered business (Udyam, 2026)

Built Siffty, a SaaS that connects to a business's Instagram account, reads incoming DMs, sorts them with AI, and helps the business reply faster from one inbox.

Took the product from idea to Meta App Review approval in under 6 months, including Meta Business Verification and a recorded product demo.

Directed AI coding agents to build the full product: web app (Next.js), server (Node.js), database (PostgreSQL), real-time inbox updates, and AI message sorting with Gemini.

Added secure sign-up with email verification and Google login, plus Instagram account connection through Meta's official login.

Made sure each business can only see its own data, and tested this with automated tests.

Launched the product live on siffty.com with hosting, database, and transactional emails set up.

Created motion-design launch videos for Siffty using the Higgsfield video-generation MCP inside Claude Code.

Planned the business side: pricing for India (INR) and international users (USD), a free trial, and an influencer launch plan.

Researched each new problem while building: learned the Meta API, deployment, and security step by step, then applied it to the product.

EDUCATION

B.Sc. Computer Science (Undergraduate) 2023 – 2026

Govt. Swami Vivekanand College Lakhnadon, Seoni, MP | CGPA 6.8

LANGUAGES

Hindi, English
